

01

With adopting **NCODA Quality Standards** to go **Beyond the First Fill**, health care providers are able to utilize easily assessable information in the patient's medical records to help prescribers make more informed decisions. This allows the patient to receive proper satisfied care.

02

The patient is now able to receive all their prescription through the MID service within the doctor's office, which helps provide a **stronger continuity of care**.

03

The Cancer Center is able to work with the Payer/Employer group to ensure **cost savings, enhanced patient satisfaction, and better health outcomes**.

04

Instead of Mail Order, the Cancer Center is able to manage unnecessary drugs from being delivered to patients thereby reducing waste and saving money for the patient and healthcare system.

05

Keeping the prescription at the Cancer Center, the MID service is able to better track medications and support the **continuity of care**.

06

The pharmacist and patient care team are able to **better communicate** with the patient and engage with them on **managing their side effects, financial assistance, and overall care**.

07

This enhanced care leads to:

- Improved cost savings
- Timely dispensing of correct prescriptions
- Better patient adherence to medications
- Maximizing beneficial patient outcomes and satisfaction
