

PASSION FOR PATIENTS

Expansion Analysis of a Grassroots Oncology Organization

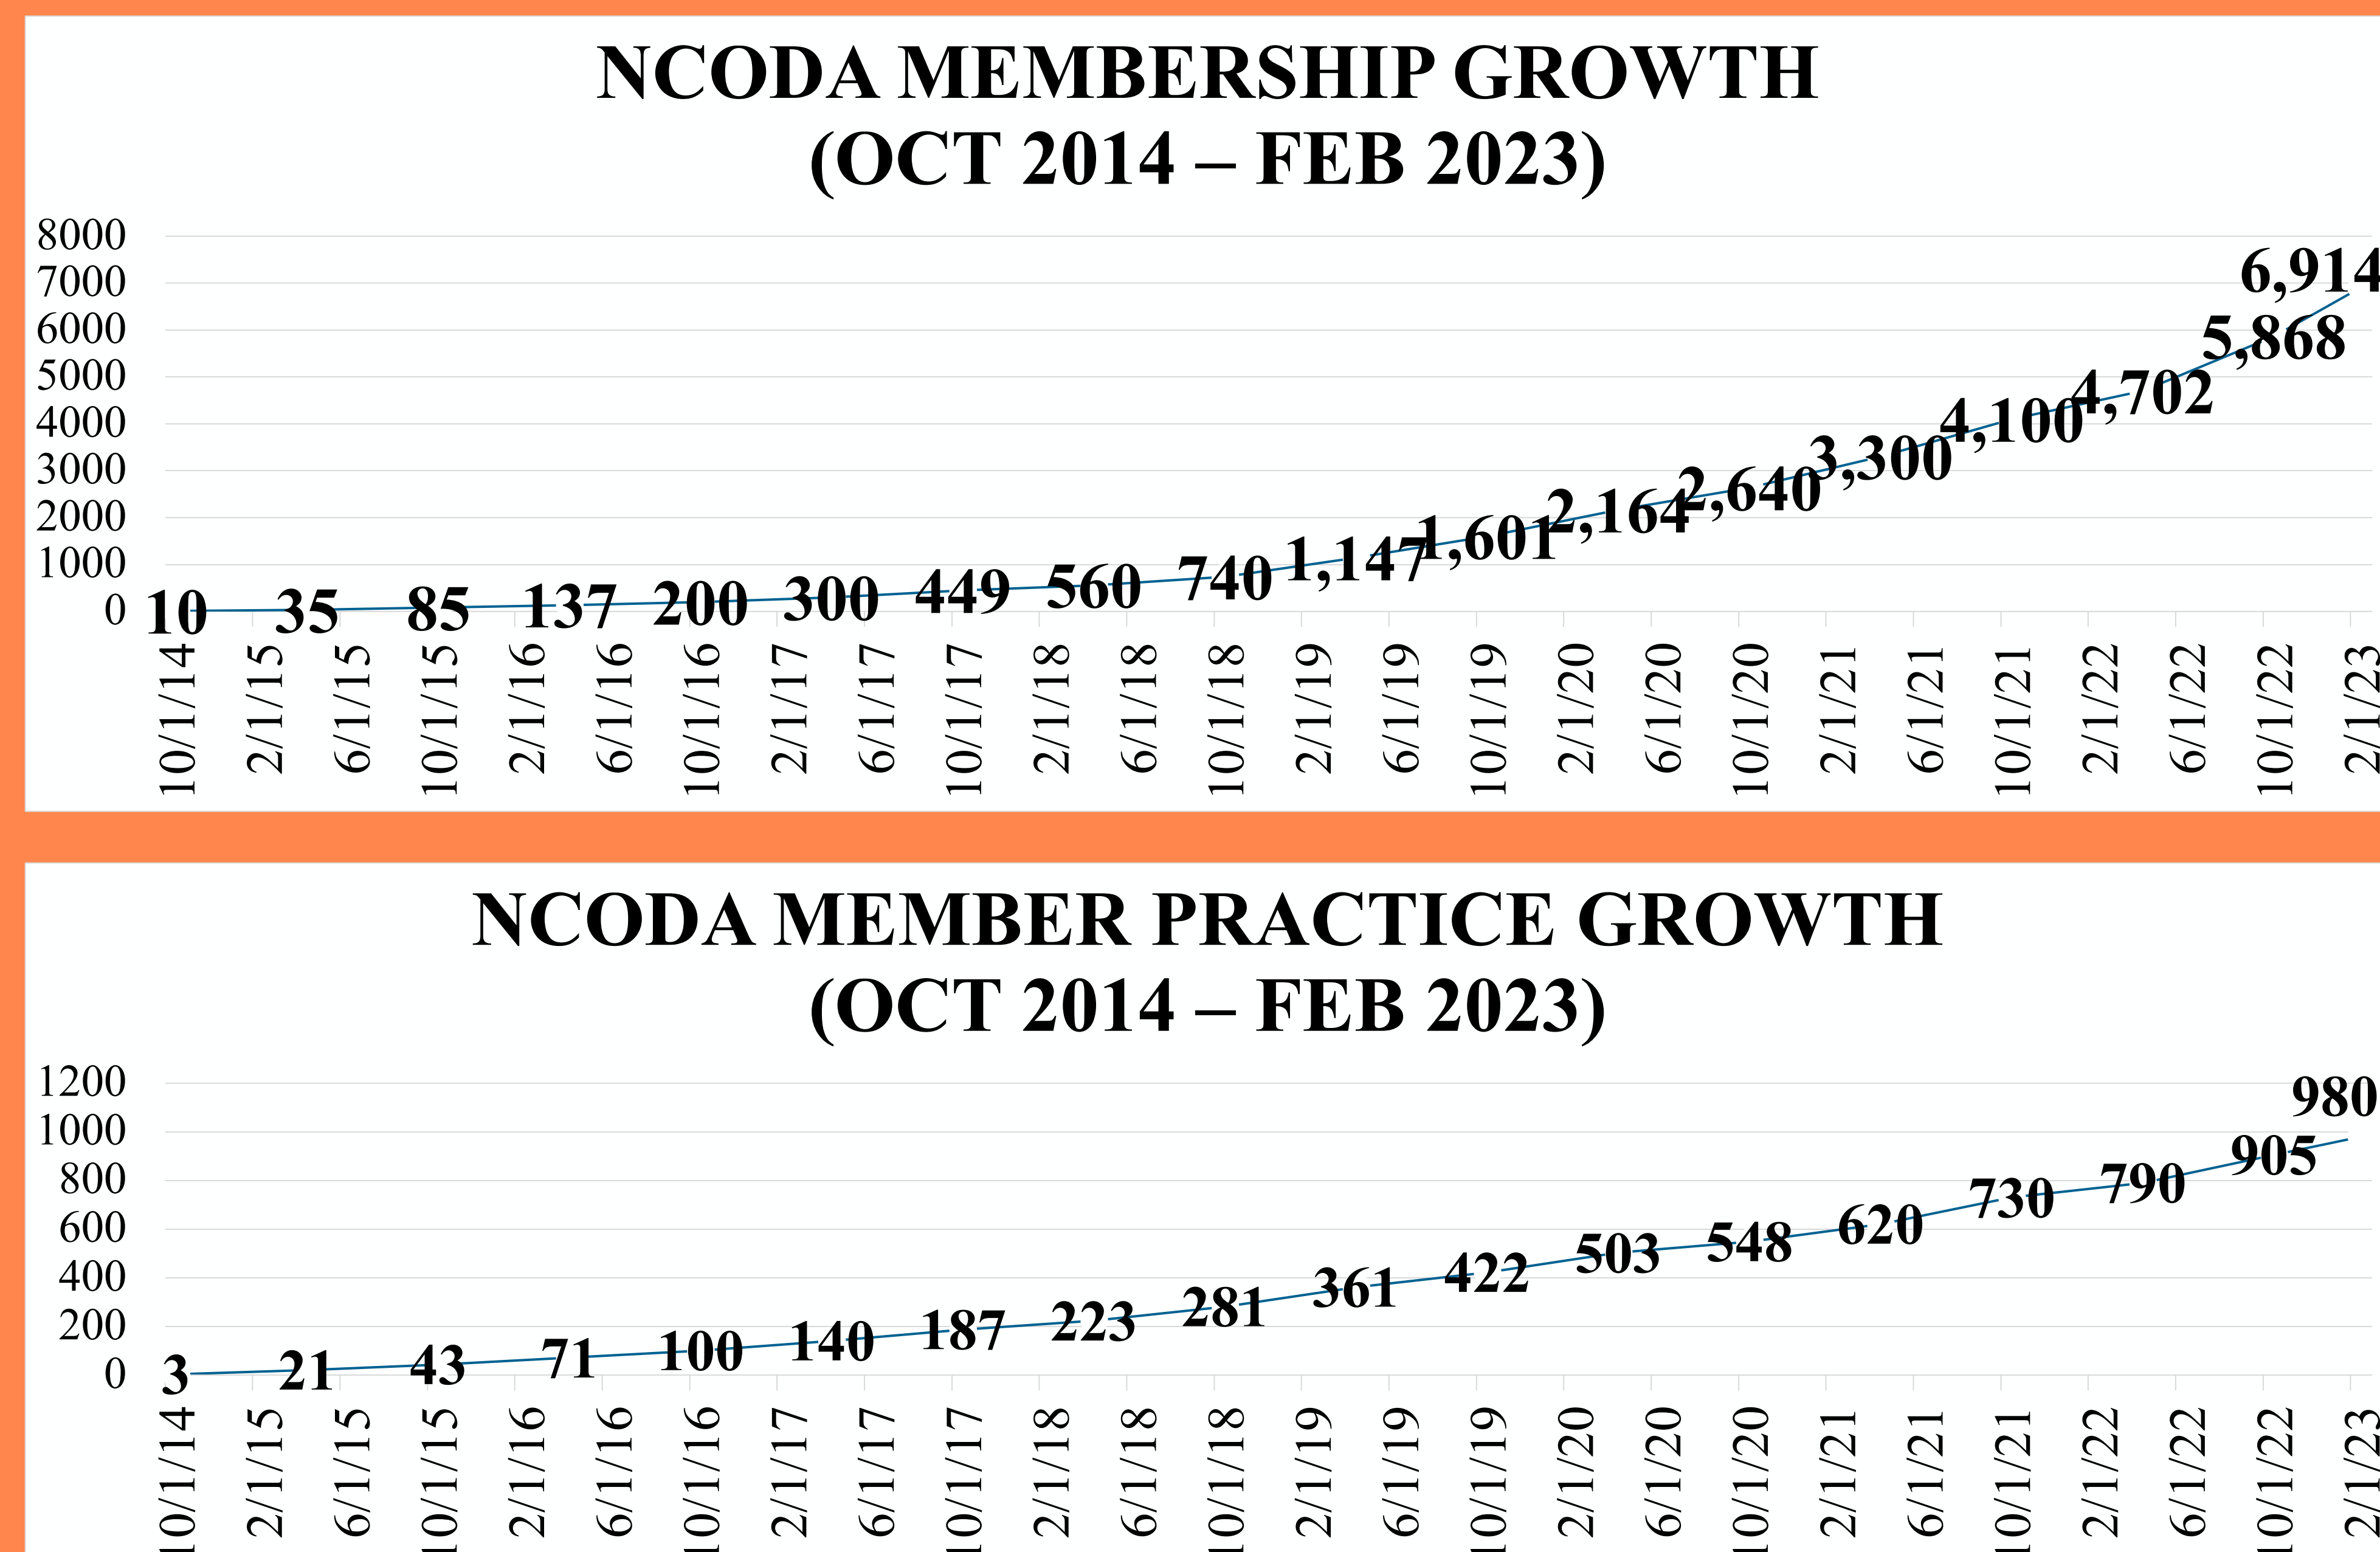

Background

- Standardized patient care in the oncology office dispensing pharmacy setting has historically been inconsistent. This is due to the fragmentation of practice care models and the growing disconnect between patients and providers.
- NCODA strives to create and foster patient-centered quality standards which better reflect the changing oncology landscape and a practice's ability to provide valuable knowledge and expertise at the point of care.
- By effectively engaging with the oncology community, NCODA has attracted like-minded individuals who focus on the multiple aspects of cancer care.
- NCODA has expanded membership in the last few years to include more members from the following areas: 1) health systems, 2) academic institutions, 3) integrated delivery networks (IDNs), and 4) urology practices with pharmacy/dispensing services.

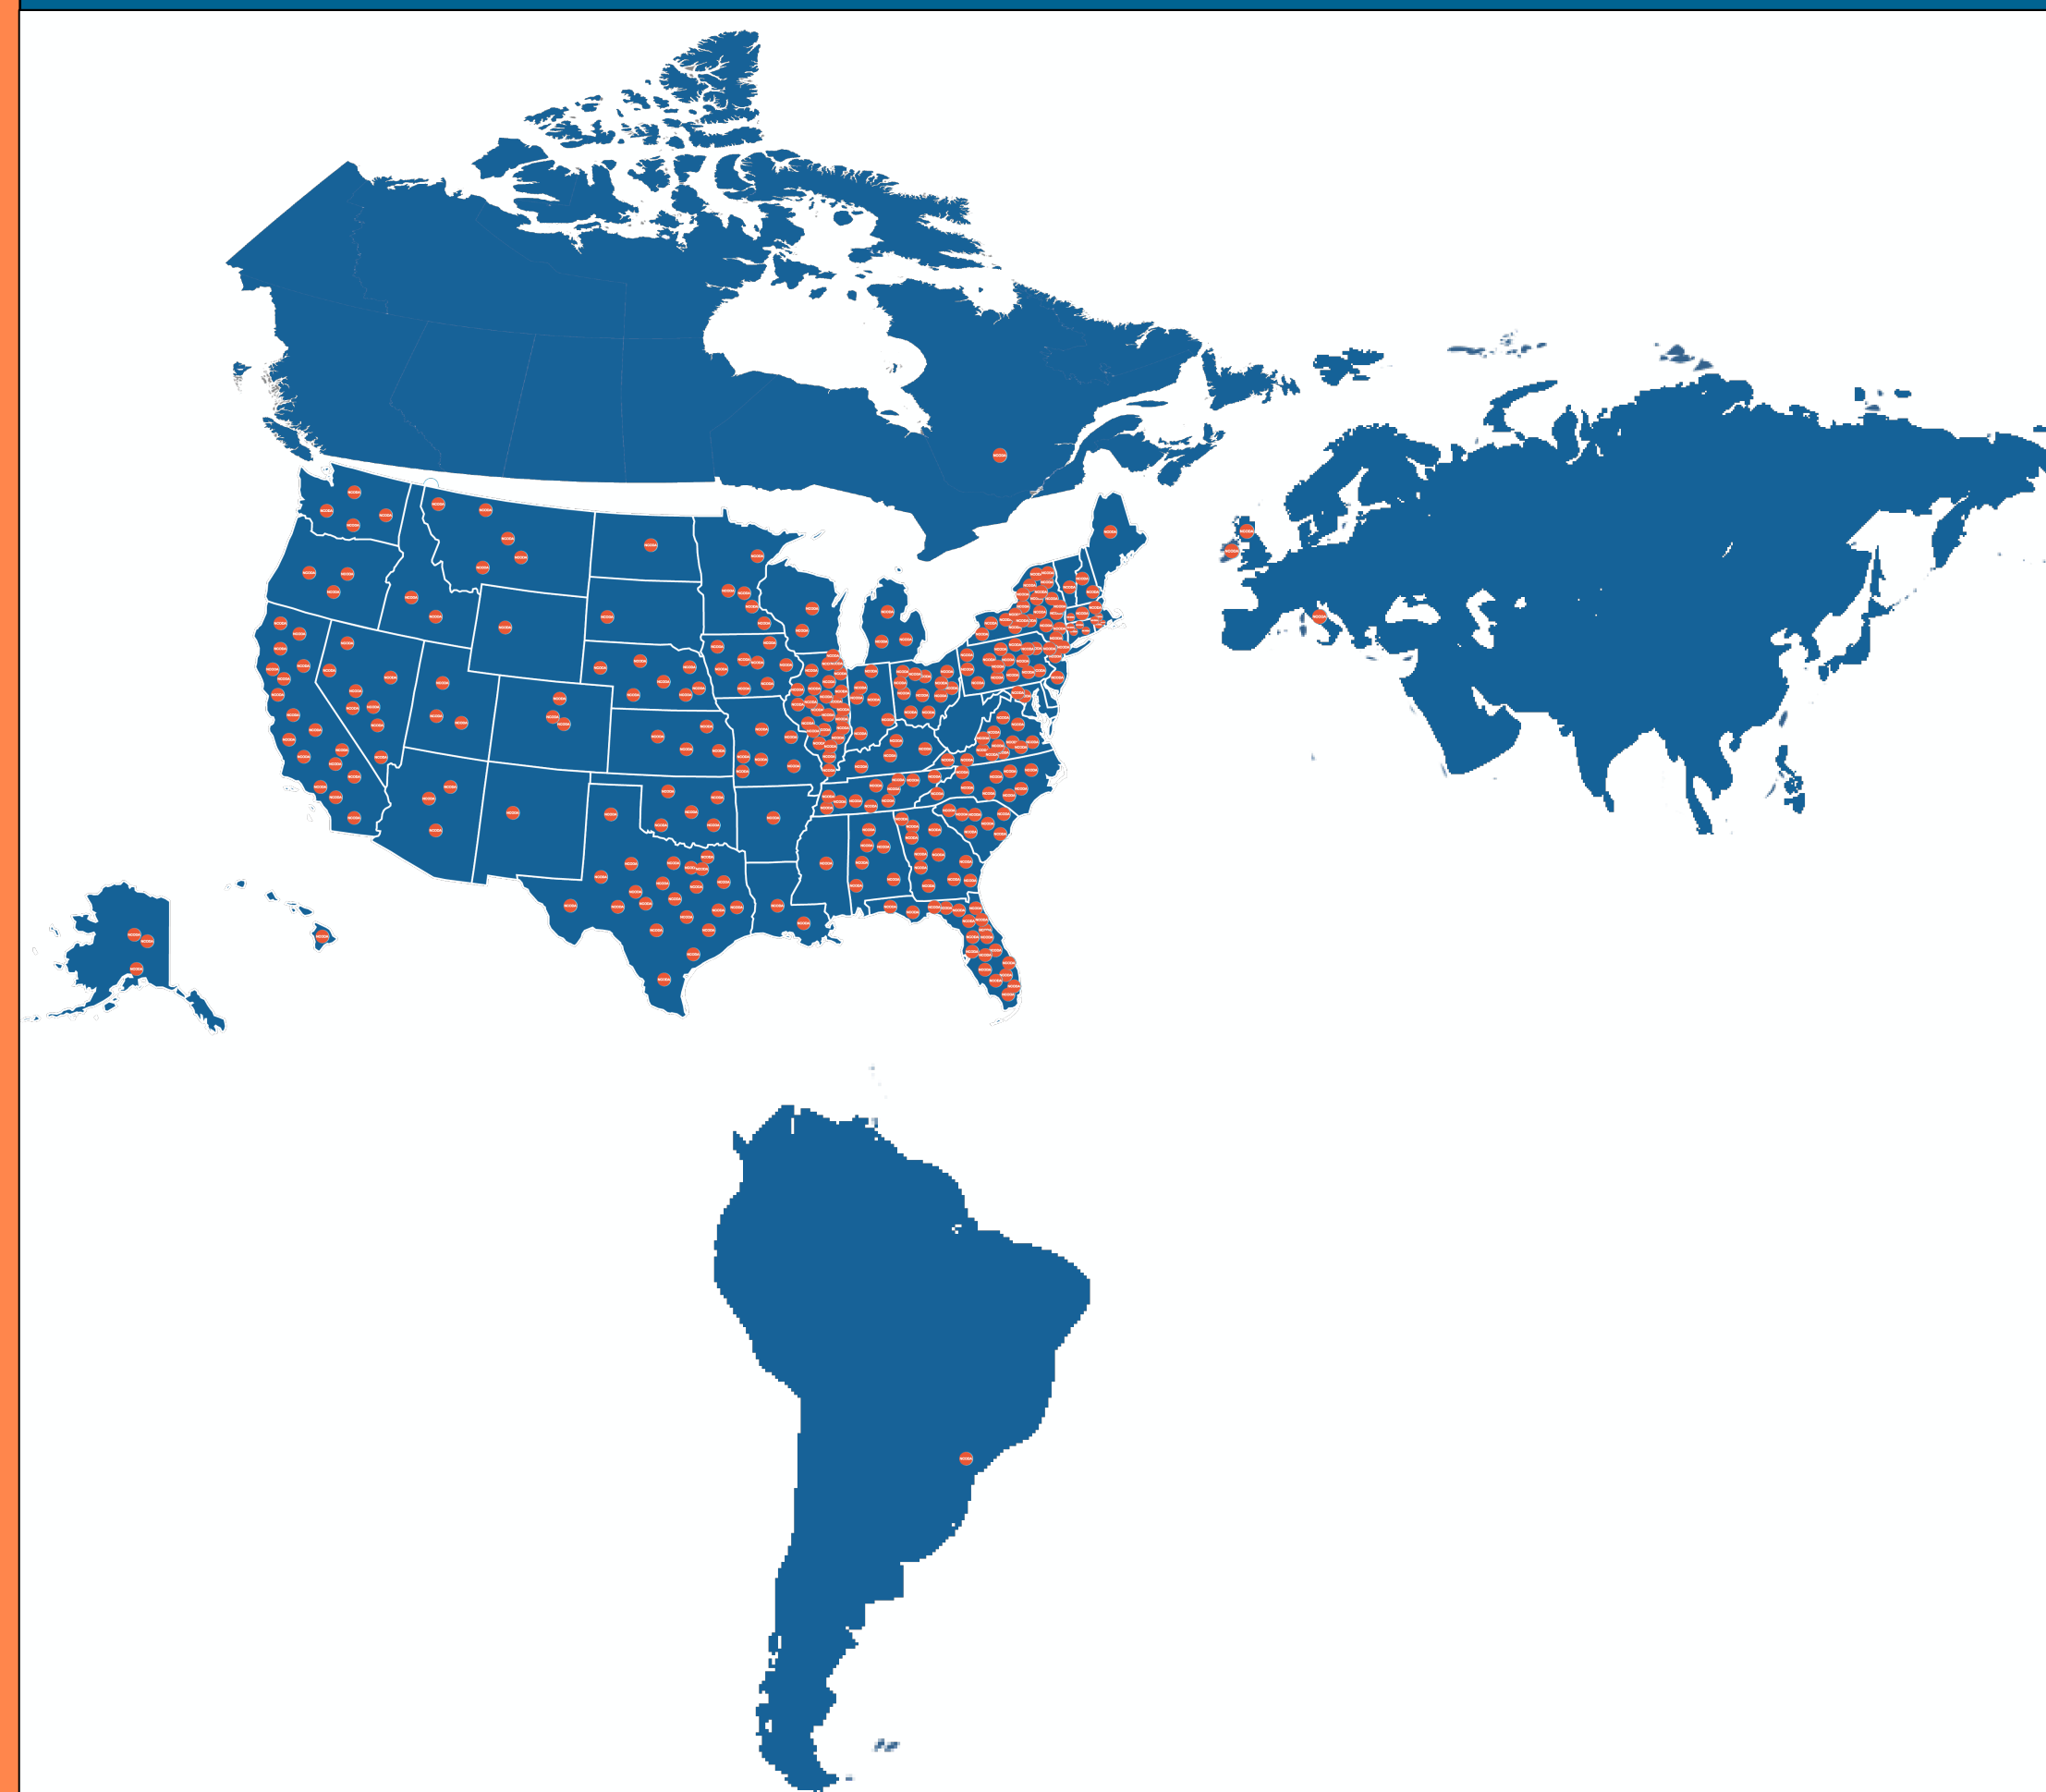

Objectives

- To analyze the growth of NCODA, a grassroots oncology organization, in both depth and scope of membership.
- Analysis includes factors such as expansion of geography, demographics, and overall membership growth.

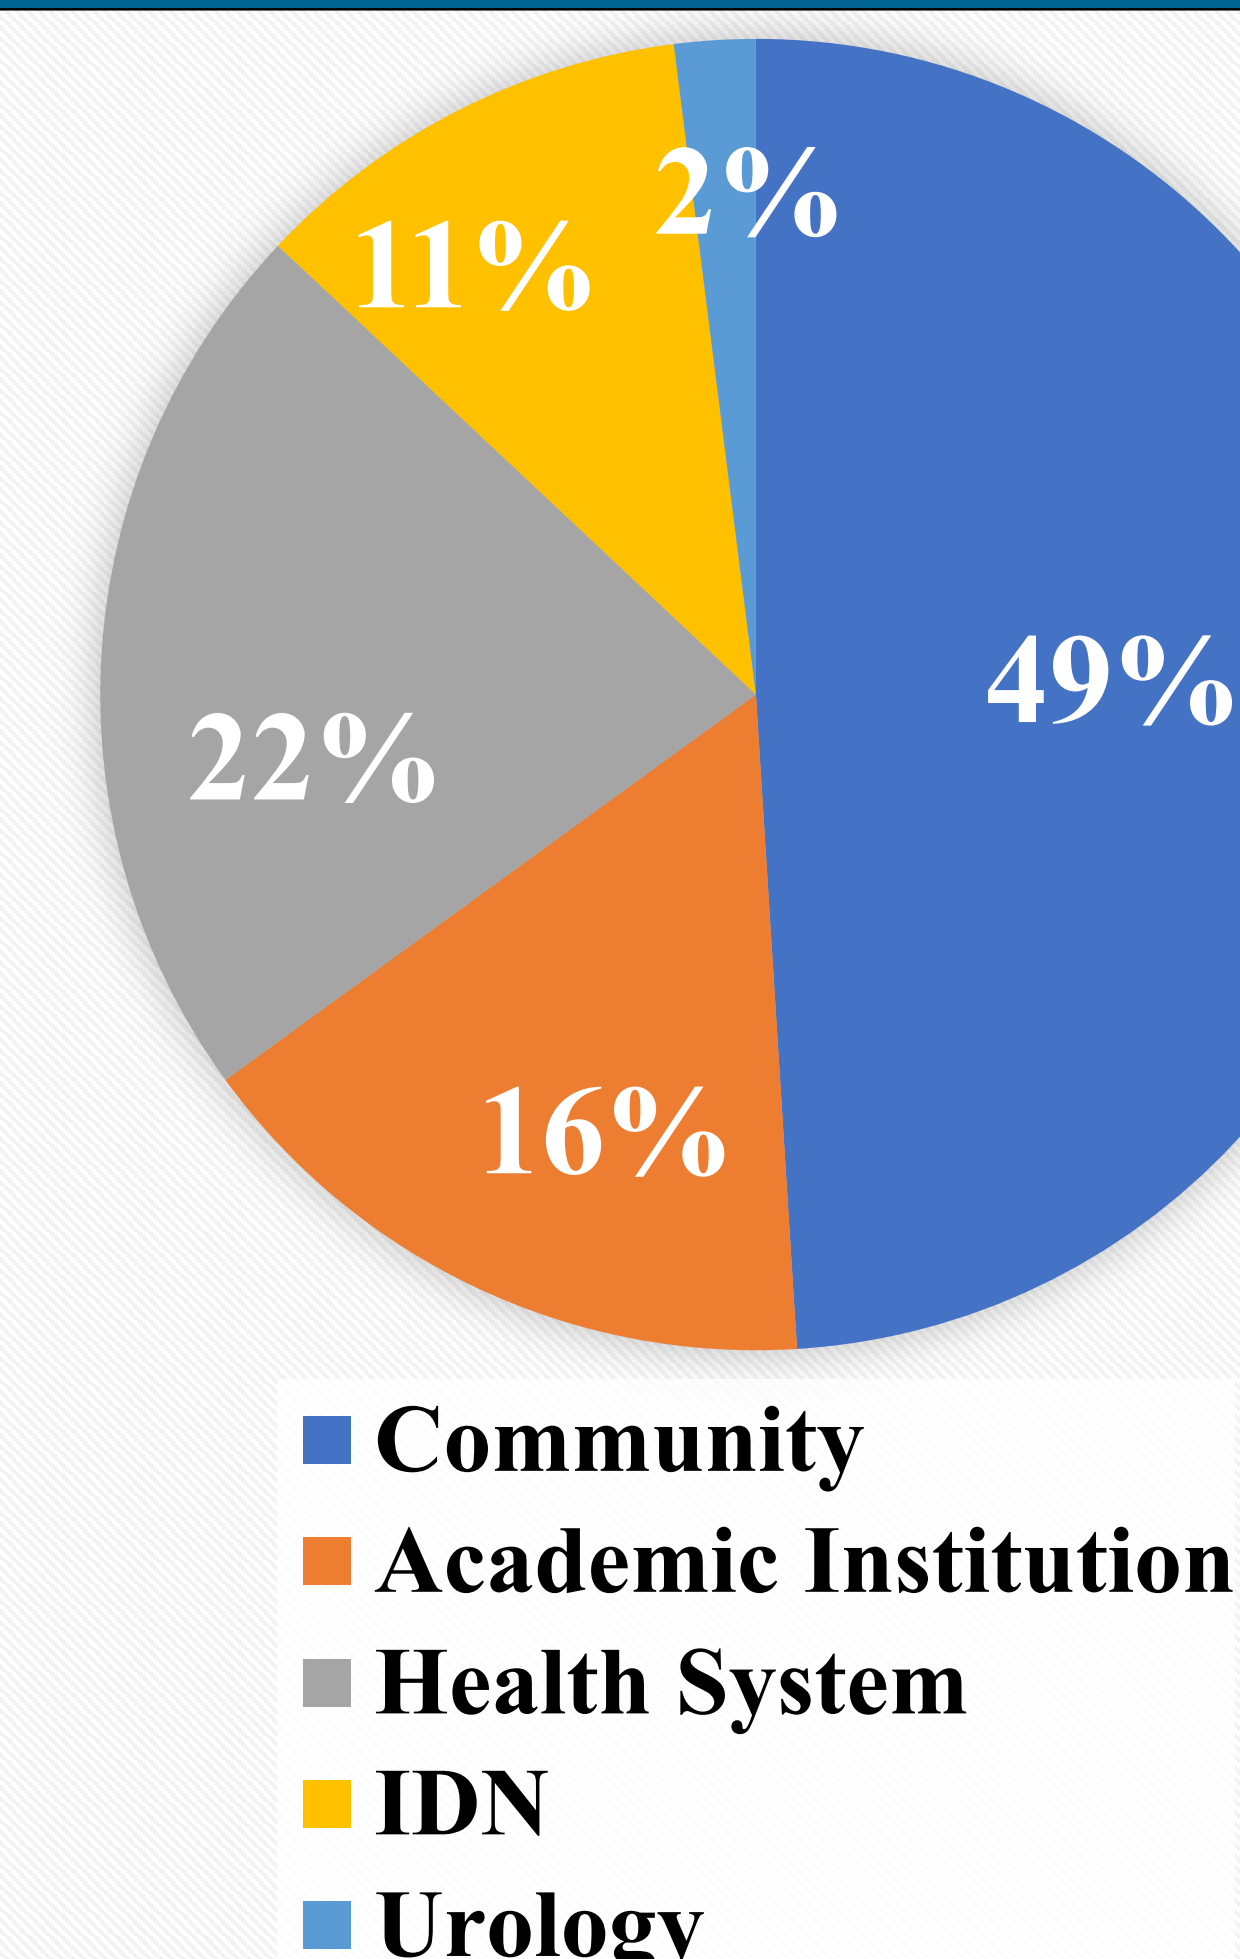

Data

Membership Geography

Membership Demographics

Discussion

- Data for growth of practices and membership before 2016 is approximated based on retrospective information.
- NCODA's criteria for number of practices is as follows:
 - For practice networks with multiple locations, NCODA considers a network as **1** practice.
 - i.e. The Texas Oncology network of multiple sites of service are accounted for as **1** practice.
- NCODA's main demographic of community practices was expanded in 2018 to include health systems, academic institutions, integrated delivery networks, and urology practices with pharmacy/dispensing services.
- Health systems are currently the fastest growing segment of overall NCODA membership.
- Current reach extends to **50** states in the USA and **20+** additional countries around the world.

Conclusion

- NCODA's original scope of community oncology has expanded as other practice sites dedicated to improving oncology patient care have found value within NCODA, such as health systems, academic institutions, integrated delivery networks, and urology practices.
- NCODA continues to grow every year in both scope of practices and overall membership.
