

Treatment Support Kits

AE • Management • Reimagined

Our 'Why'

NCODA developed Treatment Support Kits (TSKs) to provide patients and caregivers with **resources that make sense** for adverse event (AE) management when taking oral anti-cancer medications

Origins

- ✓ A beta test at 24 community and health system cancer centers was conducted in from 2018-2019 to determine viability of TSKs
- ✓ A total of 240 capecitabine kits were distributed, and patients & HCPs were surveyed

Beta Test Results

Patients Stated
They Needed The Kit

Patients Rated Kit
As High Quality

Providers Rated
Kit As Useful

N = 234

Leadership

A committee of clinical experts determines what educational and OTC products are included in each TSK

Benefits

- ✓ Curated content and products determined by clinical experts
- ✓ Easy to read educational material
- ✓ Avoid manufacturer branding hurdles in clinics
- ✓ Kit options available for generic oral anticancer medications

Kits Available

- | | | |
|----------------|--------------|----------------|
| ✓ Abemaciclib | Capecitabine | ✓ Regorafenib |
| ✓ Abiraterone | ✓ Neratinib | ✓ Temozolomide |
| ✓ Cabozantinib | ✓ Pacritinib | ✓ Tivozanib |
